

PAGE 1: SYSTEM INITIATED

Welcome to the ultimate broadcast-ready presentation engine.
Use the Controller Viewport box to frame this slide.
Watch the smooth transitioning as you scroll downwards.

Status: ONLINE | Latency: <10ms | FPS: 60+ GPU

01. DUAL-WINDOW STATE SYNC

Ultra-Low Latency BroadcastChannel Technology

PAGE 2: COMMUNICATION ARCHITECTURE

- Pure local memory communication without servers.
- Sync latency is kept under 16ms (1 frame delay).
- High-DPI independent viewport matrices transfer.
- Supports continuous canvas layout for flawless pagination.

02. PHYSICAL LERP FILTERING

Visual Smoothing via Linear Interpolation

PAGE 3: HARDWARE ACCELERATION & KINEMATICS

- Linear Interpolation (Lerp) algorithm smoothes viewport drift.
- Dragging frames rapidly will still look like a physical crane shot.
- Configure smoothness value dynamically on the right slider.
- GPU accelerated CSS transform translates 3D coordinate spaces.

03. OBS OVERLAY & CHROMAKEY

Professional Chromakey / Transparent Alpha Channels

PAGE 4: COMPOSITING & BROADCAST DESIGN

- Press green circle on Controller to activate Chromakey Green (#00FF00).
- Use Transparent (T) theme to merge PDF drawings right over video feeds.
- Simply add '<http://localhost:3000/presenter.html>' to OBS Browser source.
- Zero UI configuration prevents unwanted cursors or scrollbars.

STUDIO SYSTEM SHUTDOWN

Antigravity PDF Presenter - End of Demo Document

PAGE 5: BROADCAST WRAP-UP & Q&A

Thank you for evaluating the premium broadcast PDF system.
You can now replace this demo file with any client PDF files.
Designed and implemented by Antigravity AI Engine.
